

ABSTRACT OF THE DISCLOSURE

The present invention discloses a system for real-time device driver error handling. The system includes a user computer having a device driver, a monitoring unit and a device drive information, the monitoring unit monitoring an operating state and searching the device driver information, and outputting the diagnosing message to the user when the device driver errors occur, a web server having a driver error handling program, the device drive error handling program storing a standard driver information, performing a diagnosis of the device driver by comparing the standard driver information with the device driver information, and displaying the diagnosing result on the user computer.
